The World Association of Veterinary Laboratory Diagnosticians Conference (WAVLD) will be held in Saskatoon, Canada in June 2015. It is being hosted by Prairie Diagnostic Services Inc. on behalf of the Canadian Animal Health Laboratorians Network (CAHLN).

This is the first time that the World Congress has been held in North America since 1999 (Texas). The conference offers a unique continuing education opportunity.

The conference will feature two and a half days of themed presentations and poster sessions as well, an exhibition featuring products and services for the veterinary diagnostic sector. The conference themes include management of endemic disease, new and emerging disease, new technologies, turning lab data into intelligence, and wildlife and one health. A special one day seminar by the The World Organisation of Health (OIE) is one of the components of the conference.
